

Prexcyt Quest: The First Cryptex Hunt Solution Guide

Light Grid

As you experiment with the light grid, you'll notice that pushing the buttons causes them to turn on or off, and that certain arrangements cause the row or column markers to turn green. The goal, clearly, is to get all the rows and columns to turn green simultaneously.

The key, other than trying at random, is to notice that each row or column turns green when the right number of lights in that row or column has been turned on. With that information, you'll be able to quickly solve to the following pattern. A chasing-lights effect will reward your completion and the grid will lock:

		X	X	X
		X		X
	X	X	X	X
		X		
		X		X

Once solved, you need to figure out how to turn it into a word for entry into the Cryptex. If you look at the pattern and think about turning lights on or off, it should lead you to binary. The chasing lights and banded rows indicate you should read them across and down:

00111	7	G
00101	5	E
01111	15	O
00100	4	D
00101	5	E

Convert the binary to decimal, and find the corresponding letter of the alphabet.

Solution: GEODE
