

Prexcyt Quest: The First Cryptex Hunt Solution Guide

Web

Magic words to be used, then the web will be removed.

It's tempting to try to manipulate this image by changing the color levels and brightness, but doing so will just reveal the phrase NOPE, showing you're on the wrong path. In addition, this approach ignores the instruction to use the magic words.

Once again, these are letters in the Sage Alphabet, but with a rather strange layout.

B	A S	I C
F	E	Y
A	R	T
M	A G	I C
R	A N	G E

The keys to this puzzle is to notice the 3-column arrangement and to treat these not as letters but as their corresponding number values, remembering that the Sage Alphabet is in Base-27.

Base-27				Base-10		
2	1,19	9,3		2	46	246
6	5	25		6	5	25
1	18	20		1	18	20
13	1,7	9,3		13	34	246
18	1,14	7,5		18	41	194

Treating these as RGB values, use an image editor (with a Replace Color function) and replace each RGB value with 0,0,0 -- make sure you know whether your editor expects decimal or hex values. This will make parts of the web disappear until only the solution is left.

Solution: SPIEL
